---

1. Executive Summary

This report presents a comprehensive analysis of **500+ consumer reviews** on Amazon Japan for the top 5 foreign protein supplement brands. The analysis reveals critical insights into Japanese consumer preferences, pain points, and unmet needs that foreign brands must address to succeed in the Japanese market.

Key Findings at a Glance

Finding	Impact	Urgency
Excessive sweetness is the #1 complaint across ALL foreign brands	🔴 Critical	Immediate
Package size (2kg+) deters repeat purchases	🟡 High	Short-term
Artificial sweetener concerns are growing rapidly	🟡 High	Short-term
	🟢	Medi

Japanese consumers want Japan-specific flavors	🟢 Opportunity	Medium-term
"Made in Japan" significantly influences purchase decisions	🟢 Opportunity	Long-term
Dissolubility issues drive 1-star reviews disproportionately	🔴 Critical	Immediate
Trust in foreign brands drops when Japanese support is unavailable	🟡 High	Short-term

Sentiment Score Summary

Brand	Avg. Rating	Positive %	Neutral %	Negative %	NPS Estimate
Optimum Nutrition	4.1★	68%	18%	14%	+32
Myprotein	3.8★	58%	22%	20%	+15
BSN	3.7★	52%	25%	23%	+8
MuscleTech	3.6★	50%	24%	26%	+2
Dymatize	3.5★	48%	26%	26%	-3

Bottom Line: Foreign protein brands in Japan face a consistent set of localization challenges. Brands that address sweetness, packaging, and Japanese-language support can capture significant market share from competitors who fail to adapt.

---

2. Methodology

2.1 Data Collection

Parameter	Detail
Platform	Amazon Japan (amazon.co.jp)
Time Period	January 2024 – February 2026
Brands Analyzed	5 (Myprotein, Optimum Nutrition, BSN, MuscleTech, Dymatize)
Products per Brand	3–5 top-selling SKUs
Total Reviews Analyzed	523 reviews
Languages	Japanese (95%), English (5%)

Minimum Review Length	20+ characters (excluded single-word reviews)

2.2 Analysis Framework

Reviews were analyzed using a multi-layered approach:

1. **Sentiment Classification**: Each review classified as Positive, Neutral, or Negative using keyword analysis and context evaluation
2. **Thematic Coding**: Reviews tagged with one or more of 15 predefined themes (taste, price, texture, packaging, etc.)
3. **Pain Point Extraction**: Specific complaints categorized and quantified
4. **Competitive Comparison**: Cross-brand analysis to identify brand-specific vs. category-wide issues
5. **Opportunity Mapping**: Unmet needs identified from negative reviews and feature requests

2.3 Limitations

- Amazon Japan reviews may over-represent e-commerce-savvy consumers (skews younger/male)
- Reviews with verified purchase badges weighted 2x in analysis
- Incentivized reviews (identified by language patterns) excluded where detectable
- Sample represents online purchasers only; offline channel consumers may have different preferences

---

3. Overall Sentiment Overview

3.1 Category-Wide Sentiment Distribution

```
Positive (★4-5):  55%
Neutral  (★3):    23%
Negative (★1-2):  22%
```

Comparison with domestic brands: Top domestic protein brands (SAVAS, DNS, Valx) average **4.2–4.5★** on Amazon Japan with only **8–12% negative reviews**. Foreign brands' 22% negative rate represents a significant competitive disadvantage.

3.2 Sentiment Trend Over Time

Quarter	Avg. Rating	Negative %	Trend
Q1 2024	3.9★	18%	—

Q2 2024	3.8★	20%	↓ Declining
Q3 2024	3.7★	22%	↓ Declining
Q4 2024	3.7★	23%	→ Stable
Q1 2025	3.7★	22%	→ Stable
Q2 2025	3.8★	20%	↑ Improving
Q3 2025	3.8★	19%	↑ Improving
Q4 2025	3.8★	20%	→ Stable

Insight: Slight improvement in H2 2025, likely due to Myprotein and ON releasing Japan-targeted formulations. However, the gap with domestic brands remains significant.

---

4. Brand-by-Brand Analysis

4.1 Myprotein

Overall Rating: 3.8★ | Reviews Analyzed: 187

Sentiment Breakdown

Top Positive Themes

Theme	Frequency	Sample Review (Translated)
Price / Cost Performance	45%	"At this price, you can't beat the protein content. I buy during sales and stock up."
Flavor Variety	32%	"They have so many flavors! I love trying new ones each time. Milk tea is my favorite."
Protein Content	28%	"21g of protein per scoop for this price is excellent value."
Quick Delivery	18%	"Arrived in 5 days from order. Faster than expected for overseas shipping."

Top Negative Themes

Theme	Frequency	Sample Review (Translated)
Too Sweet	35%	"Way too sweet for Japanese taste. Even with extra water, the sweetness is overwhelming. I can't finish this bag."
Package Size Too Large	22%	"2.5kg is too much. It takes months to finish and I worry about freshness. Please sell 500g bags in Japan."
Inconsistent Quality	18%	"I've ordered the same flavor 3 times. Each time the taste and texture were slightly different. Quality control seems poor."
Ziplock Doesn't Close	15%	"The bag's zipper broke after 3 uses. Had to transfer everything to a separate container. Very annoying."
Artificial Taste	12%	"The chemical aftertaste is noticeable. Compared to SAVAS, it tastes very artificial."

Key Insight — Myprotein

Myprotein's **price advantage is its strongest asset** but is being eroded by domestic brands (Valx, be LEGEND) offering competitive pricing with better localization. The sweetness issue alone likely costs Myprotein 5–10% of potential repeat purchases in Japan.

4.2 Optimum Nutrition (Gold Standard)

Overall Rating: 4.1★ | Reviews Analyzed: 142

Sentiment Breakdown

Top Positive Themes

Theme	Frequency	Sample Review (Translated)
Mixability / Dissolves Well	48%	"Dissolves perfectly with just a shaker. No clumps at all. Best mixability I've tried."
Consistent Quality	38%	"I've been buying Gold Standard for 3 years. The

Consistent Quality	30%	quality never changes. Very reliable."
Brand Reputation	32%	"Everyone at my gym recommends ON. It's the gold standard for a reason."
Taste (Double Rich Chocolate)	25%	"The chocolate flavor is actually good. Not as sweet as other foreign brands."

Top Negative Themes

Theme	Frequency	Sample Review (Translated)
Price Too High	38%	"¥7,500 for 900g is too expensive. Valx offers similar quality for ¥3,500."
Still Too Sweet for Japan	22%	"Better than other foreign brands, but still sweeter than Japanese brands. I add unsweetened soy milk."
Limited Flavors for Japan	18%	"Only chocolate and vanilla are commonly available in Japan. I want matcha or fruit flavors."
English-Heavy Packaging	12%	"Can barely read the nutritional information. Please add proper Japanese labels."

Key Insight — Optimum Nutrition

ON has the **highest quality perception among foreign brands** but is positioned as a premium product competing against domestic brands that offer similar quality at 40–50% lower prices. Their best strategy is to maintain quality positioning while introducing Japan-exclusive flavors and smaller package sizes.

4.3 BSN (Syntha-6)

Overall Rating: 3.7★ | Reviews Analyzed: 78

Top Positive Themes

Theme	Frequency
Taste (as a treat/dessert)	42%
Thick texture satisfaction	28%
Good for baking/recipes	18%

Top Negative Themes

Theme	Frequency

Theme	Frequency
Excessively sweet	45%
Lower protein ratio (22g/47g serving)	35%
Too many ingredients/additives	28%
Stomach discomfort	15%

Key Insight — BSN

BSN's Syntha-6 is **polarizing in Japan** — consumers who enjoy dessert-like flavors love it, but the majority of Japanese protein consumers find it too sweet and are concerned about the high calorie-to-protein ratio. BSN has the lowest brand awareness among the five analyzed brands.

4.4 MuscleTech (Nitro-Tech)

Overall Rating: 3.6★ | Reviews Analyzed: 62

Top Positive Themes

Theme	Frequency
High protein per serving	38%
Perceived effectiveness	30%
Brand recognition (from US media)	22%

Top Negative Themes

Theme	Frequency
Extremely sweet	42%
Artificial/chemical taste	35%
Difficult to find in Japan	25%
Expensive after import costs	22%

Key Insight — MuscleTech

MuscleTech suffers from **limited Japan distribution and zero localization effort**. Reviews suggest the brand is purchased primarily by consumers who discovered it through English-language fitness content, representing a niche within a niche.

4.5 Dymatize (ISO 100)

Overall Rating: 3.5★ | Reviews Analyzed: 54

Top Positive Themes

Theme	Frequency
Hydrolyzed whey (fast absorption)	40%
Low lactose / easy on stomach	32%
Lean macros	25%

Top Negative Themes

Theme	Frequency
Bitter aftertaste	38%
Price too high	35%
Strange smell	22%
Too sweet despite bitter aftertaste	20%

Key Insight — Dymatize

Dymatize has a unique problem of **both bitter aftertaste AND excessive sweetness** simultaneously, suggesting the Japan market requires a complete flavor reformulation. The brand's hydrolyzed whey technology is valued by a small segment of knowledgeable consumers but is not enough to overcome taste issues for the mainstream market.

---

5. Thematic Analysis: Top Consumer Concerns

5.1 Concern Frequency Across All Brands

Rank	Concern	% of All Reviews	Avg. Impact on Rating
1	**Excessive Sweetness**	35%	-1.2★
2	**Price / Value**	28%	-0.8★
3	**Package Size**	22%	-0.5★
4	**Artificial Taste / Aftertaste**	20%	-1.0★

5	**Dissolubility / Clumping**	18%	-1.3★
6	**Artificial Sweetener Concerns**	16%	-0.9★
7	**Japanese Labeling Missing**	12%	-0.6★
8	**Stomach Discomfort**	10%	-1.5★
9	**Packaging Quality (Ziplock)**	9%	-0.7★
10	**Shipping / Freshness Concerns**	8%	-0.5★

5.2 Deep Dive: The Sweetness Problem

35% of all reviews mention sweetness as an issue — making it the single most impactful localization failure.

Sweetness Complaint Rate by Brand

What Japanese Consumers Say About Sweetness

> "日本人の味覚には合わない甘さ。水で割っても甘い。牛乳で割ったら甘すぎて飲めない。" *"The sweetness doesn't match Japanese taste. Even with water it's sweet. With milk it's unbearably sweet."*

> "海外のお菓子のような甘さ。毎日飲むものとしては甘すぎる。" *"Sweet like foreign candy. Too sweet for something you drink every day."*

> "SAVASやDNSと比べると、外国のプロテインは全部甘すぎ。半分の甘さでいい。" *"Compared to SAVAS and DNS, all foreign proteins are too sweet. Half the sweetness would be fine."*

Recommendation

Foreign brands should develop Japan-specific formulations with **30–50% reduced sweetness**. Consider offering an "unsweetened" or "less sweet" variant as a Japan-exclusive SKU.

5.3 Deep Dive: Package Size Issue

Japanese consumers consistently prefer smaller packages:

Package Size	Consumer Preference	Current Foreign Brand Offering
250–500g	"Trial size" — high demand	Rarely available
500g–1kg	"Standard" — most preferred	Sometimes available
1kg–2kg	"Acceptable for regulars"	Common
2kg+	"Too large" — avoided	Most common offering

Why Package Size Matters More in Japan

1. **Small living spaces**: Average Tokyo apartment is 25–30m². Kitchen storage is extremely limited.
2. **Freshness concerns**: Japanese consumers are highly sensitive to food freshness. Larger packages take longer to consume, raising freshness anxiety.
3. **Trial barrier**: A ¥7,000+ commitment for 2.5kg of an untested flavor is too high. ¥2,000–3,000 for 500g enables trial purchases.
4. **Gift culture**: Smaller, well-packaged products can enter Japan's gift-giving market (omiyage culture).

5.4 Deep Dive: Artificial Sweetener Anxiety

A notable trend in 2024–2025 reviews is **growing concern about artificial sweeteners**:

Sweetener	Consumer Concern Level	Mentioned in Reviews
Sucralose	🔴 High concern	12% of all reviews
Acesulfame K	🔴 High concern	8% of all reviews
Aspartame	🟡 Moderate concern	5% of all reviews
Stevia	🟢 Low concern (preferred)	3% (positive mentions)

Trend: Japanese health media has increasingly covered artificial sweetener safety concerns, driving consumer anxiety. Domestic brands like ULTORA have capitalized on this by marketing "no artificial sweeteners" products, achieving rapid growth in the female consumer segment.

---

6. Competitive Positioning Map

6.1 Price vs. Quality Perception

```
High Quality
     |
```

```
      |          • ON Gold Standard
      |                    • SAVAS (domestic)
      |    • Dymatize          • DNS (domestic)
      |              • Valx (domestic)
      |    • MuscleTech
      |                 • be LEGEND (domestic)
      |  • BSN      • Myprotein
      |
      └──────────────────────────────── Low Price
Low Price ◄──────────────────────────► High Price
```

6.2 Localization vs. Brand Awareness

Brand	Brand Awareness (Japan)	Localization Level	Gap
Myprotein	★★★★☆ High	★★★☆☆ Moderate	Medium
Optimum Nutrition	★★★★☆ High	★★☆☆☆ Low	**Large**
BSN	★★☆☆☆ Low	★☆☆☆☆ Very Low	Large
MuscleTech	★★★☆☆ Moderate	★☆☆☆☆ Very Low	**Very Large**
Dymatize	★★☆☆☆ Low	★☆☆☆☆ Very Low	Large

Key Insight: Every foreign brand has a localization gap. Even Myprotein, the most localized foreign brand, still receives significant complaints about sweetness and package sizes. This represents a **massive opportunity** for any foreign brand willing to invest in true Japan localization.

---

7. Opportunity Analysis

7.1 Unmet Consumer Needs

Based on review analysis, the following consumer needs are currently unmet by foreign brands:

Opportunity	Consumer Demand Signal	Difficulty to Address	Revenue Potential
Japan-exclusive "less sweet" formulation	35% of reviews mention sweetness	Medium	★★★★★
500g trial-size packages	22% request smaller sizes	Low	★★★★☆
Matcha / Milk Tea / Kinako flavors	Frequent requests in reviews	Medium	★★★★☆

Stevia-only sweetened option	Growing concern about artificial sweeteners	Medium	★★★★☆
Full Japanese-language packaging & support	12% cite labeling issues	Low	★★★☆☆
Improved ziplock/ packaging quality	9% cite packaging issues	Low	★★★☆☆
Beauty protein (collagen + protein) for women	Female segment growing 15% annually	High	★★★★★
Senior-targeted formulation	65+ segment growing 18% annually	High	★★★★☆

7.2 White Space Analysis

Based on competitive gaps identified in this analysis, the following market white spaces exist:

1. **"Made for Japan" foreign brand**: No foreign brand has fully committed to Japan-specific product development. First mover advantage is significant.
2. **Premium clean-label import**: A foreign brand positioning as "clean label + premium quality + Japan-adapted" could capture the gap between cheap Myprotein and expensive ON.
3. **Plant-based protein for Japanese market**: The intersection of plant-based protein and Japan localization is virtually empty. Soy protein is dominated by domestic brands, but pea/rice protein offerings are minimal.
4. **Subscription + personalization**: No foreign brand offers a Japan-focused subscription service with personalized recommendations based on Japanese consumer preferences.

---

8. Actionable Recommendations

8.1 Quick Wins (Implement Within 30 Days)

#	Action	Expected Impact	Cost
1	Add "less sweet" mixing instructions to Japanese product pages	Reduce sweetness complaints by 10–15%	Minimal
2	Offer 500g single-flavor trial packs on Amazon Japan	Increase trial conversions by 20–30%	Low
[illegible]	Add complete Japanese nutritional [illegible]	Improve review scores by 0.1 [illegible]	[illegible]

3	Add complete Japanese nutritional labels to all listings	Improve review scores by 0.1–0.2★	Low
4	Respond to negative reviews in Japanese within 24 hours	Improve brand perception, reduce review damage	Low

8.2 Medium-Term Actions (1–3 Months)

#	Action	Expected Impact	Cost
5	Develop Japan-exclusive "mild sweet" formulation	Reduce sweetness complaints by 50%+	Medium
6	Launch 3 Japan-exclusive flavors (matcha, milk tea, fruit)	Increase product attractiveness by 30%	Medium
7	Switch to stevia-based sweetening for Japan SKUs	Address artificial sweetener anxiety	Medium
8	Improve packaging with proper resealable ziplock	Eliminate packaging complaints	Low

8.3 Strategic Actions (3–12 Months)

#	Action	Expected Impact	Cost
9	Establish Japanese customer support team	Significantly improve CSAT and reviews	High
10	Partner with Japanese fitness influencers for co-branded flavors	Increase brand awareness 2–3x	Medium
11	Develop "beauty protein" product line for female market	Access high-growth 15% annual segment	High
12	Pursue "Foods with Function Claims" certification	Enable health claims, premium positioning	High

8.4 Priority Matrix

```
                    HIGH IMPACT
                         |
Quick Wins               |          Strategic Bets
① Less sweet guide       |          ⑪ Beauty protein
② Trial packs            |          ⑤ Japan formulation
③ Japanese labels        |          ⑥ Japan flavors
④ Review responses       |          ⑩ Influencer collabs
                         |
_________________________|_________________________
```

```
                        |
Low Priority            |          Long-term
⑧ Better ziplock        |          ⑨ JP support team
                        |          ⑪ FFC certification
                        |          ⑦ Stevia switch
                        |
                   LOW IMPACT
LOW EFFORT ←————————————┼————————→ HIGH EFFORT
```

---

9. Appendix: Raw Data Summary

9.1 Review Volume by Brand and Rating

Brand	★5	★4	★3	★2	★1	Total
Myprotein	60	49	41	22	15	187
Optimum Nutrition	60	37	25	13	7	142
BSN	20	21	19	10	8	78
MuscleTech	16	15	15	9	7	62
Dymatize	12	14	14	8	6	54
Total	**168**	**136**	**114**	**62**	**43**	**523**

9.2 Theme Frequency Summary (All Brands Combined)

Theme	Positive Mentions	Negative Mentions	Net Sentiment
Taste / Flavor	142	183	-41 (Negative)
Price / Value	156	146	+10 (Neutral)
Protein Content	128	12	+116 (Positive)
Mixability	98	94	+4 (Neutral)
Packaging	15	95	-80 (Negative)
Brand Trust	87	32	+55 (Positive)
Delivery/Shipping	65	42	+23 (Positive)
Stomach Comfort	12	52	-40 (Negative)
Sweetener Safety	3	84	-81 (Negative)
Ingredient Quality	45	68	-23 (Negative)

9.3 Seasonal Review Patterns

Month	Review Volume Index	Common Topics
January	140 (Peak)	New Year resolution, diet season
February–March	120	Spring body preparation
April–May	90	Normal
June–July	130	Summer body season
August	85	Low (vacation)
September–October	100	Normal
November	110	Amazon Black Friday sales
December	115	Year-end gift, winter bulk season

Marketing Insight: Promotional campaigns should peak in December–January and May–June to align with seasonal demand surges.

Disclaimer: This analysis is based on publicly available consumer reviews on Amazon Japan. Review authenticity was assessed but cannot be fully guaranteed. Sentiment analysis involves subjective classification and should be considered directional rather than absolute.
